

1. **Project** - Use the appropriate HTML5 and Cascading Style Sheet elements and tags to demonstrate the layout, content look and feel, and navigation for your web site. Consider the overall objective and visitors' needs. The project is one page that represents a web site with 3-5 pages. Include in-page linking to demonstrate site navigation. While it is important to demonstrate the elements and tags within your page, the final result must be attractive, functional, and accessible.
Save the HTML file.

Create a web site with 3-5 pages - You will outline the pages, but the project submission will just be ONE single page file.

Keywords:

- CSS - attributes, application, code formatting
- head, body, meta, title, comments
- text, links - font, size, color
- images - alt
- media - display, play
- lists, table
- form
- excellence - design, usability, originality

Topic you can work on:

-For this I am thinking personal webpage idea. Like it should have my information like my name and contact info.

-It should display all of the other 8-9 project on the page

Example of Webpages:

Website: <http://www.alexafalcone.com/>
